REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art, either singly or in combination, fails to anticipate or render obvious, the method of forming a bottom electrode on at least a side wall of the insulation layer in the hole, wherein the bottom electrode and the top electrode are formed by a metalorganic chemical vapor deposition process at 180 degrees C or higher and 250 degrees C or lower using a cyclopentadienyl ruthenium complex as the precursor in combination with the other limitations of the independent claim 1.

While Hicks et al. does teach the utilization of the a cyclopentadienyl ruthenium complex as the precursor, Hicks does not explicitly disclose utilizing that precursor in combination with the specific claimed temperature range. Further, Hicks does not suggest the use of the cyclopentadienyl ruthenium complex in high aspect ratio holes nor the use of the cyclopentadienyl ruthenium for deposition in any hole at all.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Drawings

The drawings were received on June 13, 2003. These drawings are acceptable.
